Sebastian “seaboose” Marquez

sebastianmarquez.official@gmail.com | seaboose.me

Information Security master's student building tools for investigation and evidence review. Studying IT auditing and software-defined networks, with interests in security engineering, governance, and responsible AI. Brings prior physical security experience in incident documentation and communication under pressure.

Education

California State Polytechnic University, Pomona

Master of Science in Information Security | Expected May 2028

Coursework in progress: Fundamentals of IT Auditing; Managing Software Defined Networks.

Bachelor of Business, Computer Information Systems | June 2023

Minor: Cyber Security | Undergraduate GPA: 3.31 | Dean's List: 2020, 2021

Technical Projects

Surge — Telemetry Investigation Tool | Ongoing

C++, Python, Unreal Engine, Electron/React | github.com/seaboose/Surge

- Built a Windows investigation app linking gameplay telemetry to rule findings, synchronized replay, and evidence-backed reports.
- Compared human, scripted, and mixed movement in controlled trials; preserved source records and marked incomplete recordings Unknown.
- Applied bounded imports and allowlisted app communication; tested the capture-to-report workflow in a fresh Windows 11 VM.

StudyStep — Local AI Learning Workspace | Ongoing

TypeScript, React, Node.js, Electron, Ollama | github.com/seaboose/StudyStep

- Built a desktop hub that turns topics or imported notes into saved study sets with guides, flashcards, and practice questions.
- Added optional local AI, quotation and structure checks, model review, and one repair revision; kept card review and approval in the save workflow.
- Kept sources available during review and stored study sets and progress locally, with export and backup options.

Work Experience

Knott's Berry Farm | Buena Park, CA

Security Officer | June 2019 - July 2021

- Recorded facts and witness accounts in incident reports; escalated safety concerns to supervisors.
- Handled upset guest interactions calmly during high-pressure situations.

Skills

Security: Telemetry review, rule-based checks, input validation, evidence-linked reporting.

AI workflows: Local models, source and output checks, human review and approval.

Tools: Git/GitHub, PowerShell, Windows/Linux; Electron, React, Node.js, Ollama.

Programming: Python/SQL fundamentals; C++/Java familiarity; TypeScript/JavaScript project work.

Communication: Incident documentation, witness accounts, escalation, and calm guest interactions.

Languages: English and Spanish.
