Information security graduate student building Windows investigation tools and software for reviewing AI-generated work. My background in on-site incident response shapes how I document evidence so others can follow up.

EDUCATION

California State Polytechnic University, Pomona
M.S. in Information Security — Expected May 2028 · GPA 4.0

Current coursework in Fundamentals of IT Auditing and Managing Software Defined Networks.

Bachelor's degree in Computer Information Systems · Cyber Security minor — June 2023

SELECTED PROJECTS

Surge · Windows investigation software

- Built a Python replay tool that connects movement alerts to recorded gameplay so reviewers can reproduce a finding and cite its evidence.
- Wrote a C++ collector that checks loaded DLL code against approved baselines and records which memory ranges it could verify.

Insight · Reverse engineering

Designed a guided tool for reviewing AI interpretations of compiled code. Built its first case by comparing two x64 versions of a game rule and testing the behavior predicted by the disassembly.

StudyStep · AI-assisted study software

- Built a desktop study tool that checks generated answers against source material. Learners review proposed changes before saving them.
- Connected OpenHands and Fleet so development agents can hand off code edits and test them against independent acceptance checks.

SECURITY EXPERIENCE

Security Ops · Knott's Berry Farm — June 2019 – July 2021

Coordinated on-site incident response with park staff. Documented witness accounts and escalated safety concerns for follow-up investigations.

TECHNICAL SKILLS

Programming	C++, Python, PowerShell, TypeScript
Security & systems	Windows memory inspection, Ghidra, x64 disassembly, access-control testing, Linux log analysis
Engineering	Git, GitHub Actions, CMake, Docker, Electron, React
AI evaluation	Source verification, human review, regression testing, Ollama, OpenHands, Fleet

Languages · English and Spanish
